
INTELLIGENCE ATLAS™

Calendar Intelligence™

Your schedule, translated into style decisions.

PUBLISHED / ACTIVE

PURPOSE

Calendar Intelligence™ connects a member's upcoming schedule to EVRYNN's outfit generation engine. It reads calendar events, interprets occasion context, and surfaces style decisions ahead of time — so members arrive prepared, not reactive. It is a proactive intelligence layer that transforms scheduling data into styling intent.

INPUTS

- Connected calendar events (title, time, location, participants)
 - Occasion classification from event metadata
 - Historical outfit-occasion correlation data
 - Personal Style Intelligence™ identity signals
 - Weather Intelligence™ forecasts for event date/location
 - Closet Intelligence™ inventory availability
 - Member-declared dressing preferences per occasion type
-

OUTPUTS

- Advance outfit recommendations for upcoming events
 - Occasion-classified styling context per calendar entry
 - Proactive alerts for wardrobe gaps relative to schedule
 - Smart scheduling of Dress Me™ sessions tied to event timing
 - Style preparation timeline (plan now vs. day-of)
 - Event-specific reasoning with occasion confidence score
-

TRUST MODEL

Calendar Intelligence™ never reads calendar content beyond what is necessary for occasion classification. Event titles and times are interpreted for styling context only. No calendar data is stored beyond the active recommendation session. Members control connection, scope, and revocation at all times. The system declares when it cannot classify an event and defers to member input.

EXPLAINABILITY MODEL

Every calendar-driven recommendation surfaces its source: which event triggered the recommendation, what occasion type was inferred, and what confidence level was assigned to that inference. Members see the reasoning chain from calendar entry to outfit output. Uncertain

classifications are flagged, not hidden.

MEMBER VALUE

Calendar Intelligence™ transforms reactive dressing into proactive style planning. Members no longer remember to plan outfits for important events — EVRYNN surfaces those decisions before they become urgent. Every recommendation is grounded in real schedule context, explained in plain language, and traceable to a specific calendar signal.

"Your calendar is not just a schedule. It is a map of every moment you want to be dressed for."
